Water Management | Land & Water | Food and Agriculture ...

Despite increases in water use by sectors other than agriculture, irrigation continues to be the main water user globally, and agriculture is responsible for 70 percent of all freshwater withdrawals worldwide. There is an urgent need to use water more efficiently in agriculture, but, on the other hand, irrigation is one of the main ways to increase food production and rural incomes. It is imperative, therefore, to improve water management to achieve both high water productivity and increase [Irrigation Management | Land & Water | Food and ...](#) Irrigation Management In an agriculture in constant evolution, irrigation needs to adapt to new, more stringent requirements: the supply of water within large irrigated systems needs to be much more reliable and flexible than in the past.

Best Management Practices for Irrigation Management irrigation water is nothing new in Colorado, where irrigation uses about 80% of the 1.8 trillion gallons of water diverted annually in the state. Previously, these concerns centered only on water quantity; now, water quality is an important consideration in managing irrigation. To reduce nonpoint source pollution caused by leaching and runoff, irrigation systems should be managed so that the
